

Dolmen, suspension design Ferruccio Laviani 2017

FOSCARINI

One of the most iconic designs in Foscarini's history, reworked to adapt to the new opportunities offered by LED technology: Dolmen, designed by Ferruccio Laviani in the mid-Nineties. A piece with a forceful symbolic value, expression of a lamp-sculpture concept that never escapes notice, thanks to the exceptional character of the monolithic form, with four large openings similar to the portholes of a ship, and the unusual positioning against the wall.

Dolmen, suspension technical info

FOSCARINI

Description

Suspension lamp with direct and indirect light. The lamp consists of a laser-cut sheet of aluminium bent using a pressure bending machine and hand-finished. The aluminium is anodised and subsequently liquid coated with transparent varnish or coloured paint. There are two opaline PMMA diffusers, the front one is slightly embossed. There is a plate - also in transparent PMMA - between the two diffusers, which diffuses light from the multichip LEDs installed on the long sides of the aluminium frame. The plate is laser-engraved in the areas aligned with the portholes to concentrate the light reflection. Stainless steel suspension cable and a transparent electrical cable. Ceiling canopy with galvanised metal bracket and white batch-dyed ABS cover.

Materials varnished or anodised aluminium

Colors aluminium, orange, bronze

Brightness light

directable direct light

Model

hanging

Weight

net lbs: 24,25
